- Default Email Forwarder

迅捷PDF编辑器

Upload Files

- Unzip the file you downloaded from CodeCanyon.
- You will find a file name Files.zip
- Upload that file in File Manager and Unzip

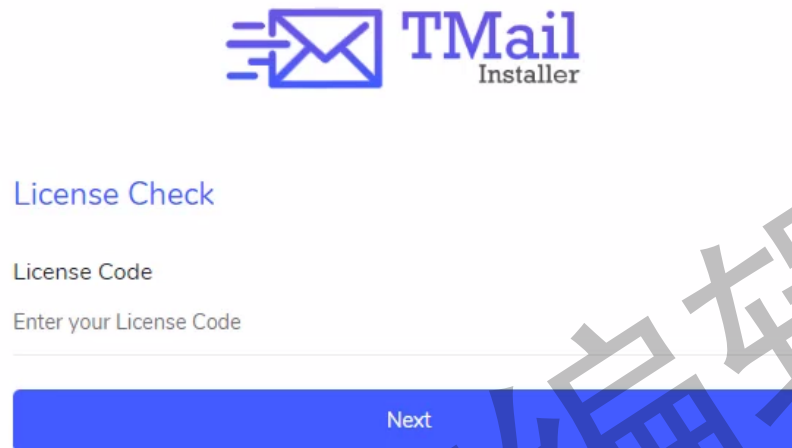

TMail Installer

#1 – License Key

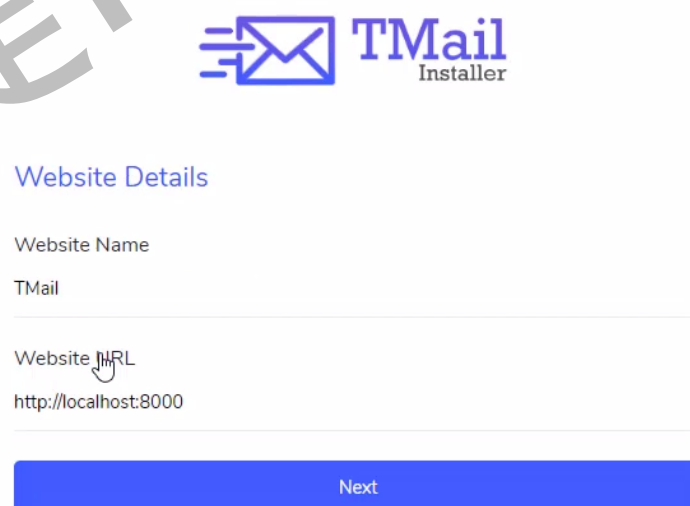

Navigate to your website and you will be redirected to TMail Installer. At first screen you can see the Video Tutorial of how you can install TMail. When you hit Next, you will be asked for your License Key. Just enter the license key which you received after buying TMail.

The screenshot shows the 'License Check' screen of the TMail Installer. At the top, there is a logo consisting of a blue envelope icon with three horizontal lines to its left, followed by the text 'TMail' in a large, bold, blue font and 'Installer' in a smaller, regular, blue font below it. Below the logo, the text 'License Check' is displayed in a blue font. Underneath, the text 'License Code' is shown in a regular black font, followed by a light gray placeholder text 'Enter your License Code'. At the bottom of the form is a large blue button with the word 'Next' in white text.

#2 – Website Details

You will be asked to give your website a title and specify the URL of your website

The screenshot shows the 'Website Details' screen of the TMail Installer. At the top, there is a logo consisting of a blue envelope icon with three horizontal lines to its left, followed by the text 'TMail' in a large, bold, blue font and 'Installer' in a smaller, regular, blue font below it. Below the logo, the text 'Website Details' is displayed in a blue font. Underneath, the text 'Website Name' is shown in a regular black font, followed by a text input field containing the text 'TMail'. Below this, the text 'Website URL' is shown in a regular black font, followed by a text input field containing the text 'http://localhost:8000'. At the bottom of the form is a large blue button with the word 'Next' in white text.

#3 – Database Details

Here you need to provide details about the database.

Database Details

Database Host
Enter Database Hostname

Database Port
3306

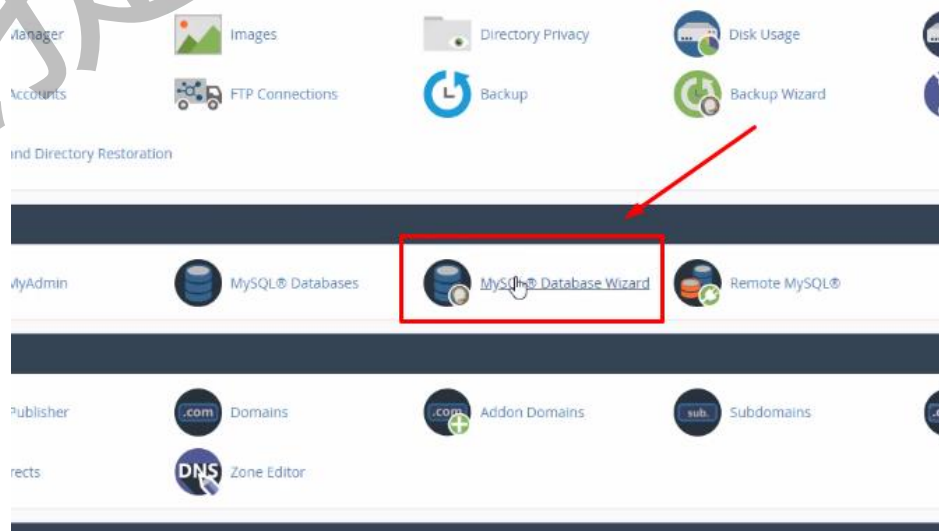

Database Name
Enter Database Name

Database Username
Enter Database Username

Database Password
Enter Database Password

Next

To create a database, goto MySQL Wizard

Give a name to your Database here and click “Next Step”

bulletin boards, content management systems, and others. To use a database, you'll need to create it. Only MySQL write to that database.

Step 1: Create A Database

New Database:

supermail_

Note: 53 characters max.

db

[Next Step](#)

Create a user and password and hit “Create User”

Step 2: Create Database Users:

Username:

supermail_

Note: 37 characters max.

Password:

Password (Again):

Strength

Very Weak (0/100)

[Password Generator](#)

[Create User](#)

Assign this user to the database created by clicking on that checkbox and hit “Next Step”

Step 3: Add user to the database.

User: supermail_db
Database: supermail_db

☒ ALL PRIVILEGES

☒ ALTER	☒ ALTER ROUTINE
☒ CREATE	☒ CREATE ROUTINE
☒ CREATE TEMPORARY TABLES	☒ CREATE VIEW
☒ DELETE	☒ DROP
☒ EVENT	☒ EXECUTE
☒ INDEX	☒ INSERT
☒ LOCK TABLES	☒ REFERENCES
☒ SELECT	☒ SHOW VIEW
☒ TRIGGER	☒ UPDATE

[Next Step](#)

#4 – Email IMAP Details

Here you need to provide details about the email account
